FURNIT is an AutoCAD-based application that allows users to build furniture objects by selecting which elements they want to use. The units that are used to dimension the furniture are then automatically displayed, thus helping engineers build a realistic 3D model with ease. In order to execute the process, users have to enter the folder where FURNIT is located. Also, they have to properly set the SAVECPATH and SECURELOAD parameters to 0 or the TRUSTEDPATHS folder, as well as add the application to Startup Suite. From the FURNIT menu, users can start by selecting the SENDOBJECTS command, which will lead them to an environment in which they can choose from different configurations and objects to be used as the basis for the furniture objects. Each of the objects can also be easily modified via the X and Z axes and can be associated to a PLATFORM to guarantee a homogeneous, yet realistic finish. Plates and Components : Furniture objects can be composed of three-dimensional (3D) elements: - PLATES: These elements can be created directly by setting their base type to PLATFORM. Alternatively, they can be viewed in a circular shape (CIRCLE) or in a polyline manner (POLYLINE). - POINTS: These elements can be created directly, but they can also be based on the PLATES objects. Once they are based on PLATES, they become PLATE-BASED. - COMPONENTS: These elements can be viewed as parent-child objects and can also have assigned CIRCLE or POLYLINE base types. - EDGINGS: These elements come with several types of possible configurations. They can have fixed or adjustable radius, they can have variable widths, their base dimensions can vary or they can even have a diagonal shape. - HANDLES: These elements can be set to have an uniform or a variable radius. Additionally, they can have a straight or a curved shape. Furthermore, they can have assigned CIRCLE or POLYLINE base types. - GROVES: These elements come with several types of possible configurations. They can have a fixed or adjustable radius, they can have variable widths, their base dimensions can vary or they can even have a curved shape. - PINS: These elements are parent-child objects and can also have assigned CIRCLE or POLYLINE base types. - BARS:

What's New In FURNIT?

FURNIT allows architects to quickly design a variety of furniture objects such as tables, chairs, armchairs, cabinets, beds, wardrobes and more. It is an easy-to-use application that can be used by architectural engineers who need to quickly generate high-quality projects. In addition to the series of furniture bodies, it also offers users to modify each one of them in a convenient way, as it offers all the items used to design them. For instance, a table's bottom can be modified using edge handles, and the legs can be modified using bar elements, which allows users to quickly change the configuration of a table, changing a leg or a handle by clicking on them directly. Furniture can also be assembled together by relying on pegs, handles, hinges or bars, which allows engineers to create assemblies by relying on them. The same applies to other furniture types, such as chairs, armchairs or cabinets. Furniture can be assembled in two ways: the first one is by joining several pieces, while the second one is by using a built-in assembly tool. The latter is very useful, as it allows users to quickly assemble and disassemble furniture, without having to deal with numerous pieces, as it helps to create a unified body. Moreover, plates can be rotated in order to adjust their position in a way that helps architects design furniture objects. Finally, each part that was used to design a furniture body can be inserted, modified or removed by users by simply clicking on them. Every element can be customized as it provides users with customizable data such as colors and cost, among others.
